

REMARKS

In view of the above amendments and following remarks, favorable reconsideration in this application is respectfully requested. Claims 4-7, 9, 11, 21, 32-35, and 39-43 have been cancelled and new claims 44-45 added by this Amendment.

The Examiner rejects claims 1 and 4-43 under 35 U.S.C. §103 as being unpatentable over Lynde (Patent No. 6,181,302).

The claims have been amended to recite features not taught or suggested by Lynde. For instance, with respect to claims 1 and 22, a person of skill in the art could not deduce the invention based on the teachings of Lynde. The advantages of the claimed invention come from the fact that geographical and pictorial data are supplied at different scales and the invention links annotations obtained at one scale with annotations obtained at other scales. For this purpose, a linked pyramid representation of annotations can be used. In which every annotation has offspring at a finer scale and ancestors at a coarser scale. Offspring of an annotation are more detailed annotations of a geographical object, and an ancestor of an annotation is a common annotation of several geographic objects. Some annotations may originate only at sufficiently fine scale, as corresponding features may not be recognizable at coarser scales.

In addition, since Lynde discloses the use of binoculars, the elements are not selectable (claim 36). Lynde also does not teach the use of visual cues (claim 38).
